# Carpooling & Stadium Catering App

Objective

The aim of the app is to enable the fans of the 1st division club VfL Wolfsburg to have a more comfortable and efficient journey to the stadium and back.

Result

The MESH platform, which we developed in-house, gives us the opportunity to create an innovative and cross-platform application for VfL Wolfsburg without any problems

Challenges

The requirements included a catering function that should be available in the same application to make the life of a VfL football fan easier.

Solution Highlights

- Reduced queuing at entrance of the stadium :
  - From the point of view of a owner of a car if will provide a way to share the sits, therefore open the posibilities to reduce carbon emitions, save money or earn.
  - From another hand, the passenger will have the posibility to arrive faster, cheaper and more confortable and also meet new people.

- Provide a comfortable solution to consume in the event:
  - From the point of view of the assistant of the match it reduced queuing in side of the store of the stadium providing a comfortable way to pan a greate moment for the match.
  - From the point of view of the stadium shop manager, he can plan the stock and its level of sales in advance.
